E-MAIL

Email service is handled by sendmail. Sendmail is a popular open source, Unix based system for implementing the simple mail transfer protocol(SMTP) for transmitting email. The internet server will have the subscriber?s mailbox. Subscriber will fetch their mails from the internet servers using pop. Quota is implemented in the internet services to keep the subscriber?s mail box size under control. The internet servers also provide addition email services such as spam filtering and Anti-virus protection. These are also open source, the spam assassin and clam Av respectively. Additionally, extra mail service such as web based Email utility is provided to facilitate operating system independent access to mail from anywhere on the internet. The subscriber only has to use the browser to lookup email on the server and get access to their email folders open web mail, a open source software is customized and used.

SONY'S MULTIMEDIA POWER HOUSE NOTEBOOK

It would not be wrong to call Sony?s recently launched AR series laptop a multimedia powerhouse. The inclusion of a Blue-Ray recordable drive makes it the first note book to come with a high definition (HD).Recordable drive. The note book also has a 43.2 cm(17 inch) XBRITE screen with a native resolution of 1920*1200, an HDM, o/p port for displaying HD content on a larger HDCP complaint display, a 2.0 GHZ Intel Core Bus processor, 1 GB of 533 MHZ DDR2 memory and an NVIDA Geforce GO7600 GT 256 MB graphics card. It also has an integrated MOTION-EYE camera with a built-in micro phone and a 200 GB hard disk. Top this off with Microsoft Windows XP media centre 2005 and you don?t need to guess why multimedia professionals will be queuing up for this note book.
